

Performance and Risk Report

**SciBeta United States
High-Factor-Intensity Diversified
Multi-Beta Multi-Strategy 6-Factor
4-Strategy EW**

Overview

Index Description as of 31-Dec-2018

The table summarises the index construction principles.

SciBeta USA HFlnt Div MBeta MStrat 6F4S-EW	Index
Currency	USD
Number of Constituents	297
Cap Coverage (Global Universe)	32.6 %
Regional Universe	United States
Stock Selection	H-Flnt. Multi-Beta Six-Factor EW
Weighting Scheme	Div. Multi-Strategy (4S)
Risk Control	None
TO Control	n/r
Base date	21-Jun-2002
Live Date	16-Mar-2018
Broad CW	SciBeta USA CW
Bloomberg	SBUXAMBG (USD, RI)
Index Changes	June 2016

Analytics are calculated at 31-Dec-2018.
Analytics are updated quarterly.

The index coverage is calculated at the last rebalancing time.

Index Characteristics

Universe - United States of America

The United States of America universe consists of equities from the United States of America.

Selection - Multi-Beta (EW) Six-Factor Stock Selection

Multi-Beta stock selection is a form of multi-factor allocation that consists of selecting stocks from the underlying equity universe that correspond to one of the chosen risk factors.

Filter - High Factor Intensity Filter

The Factor Intensity filter is applied to a stock selection scheme, targeting a given factor tilt, to improve its exposure to other rewarded factors in a multi-factor investment setting.

Weighting - Diversified Multistrategy

In the Diversified Multistrategy weighting scheme, four Scientific Beta strategies are combined in order to diversify away individual strategies' specific risks and to mix strategies with different sensitivities to market conditions.

Risk Control - No Relative Risk Control

No Relative Risk Control indicates that the strategy does not control the relative risk resulting from a stock selection and weighting scheme decision with regard to the cap-weighted reference index.

Total Return Index in USD

Latest Performances

Latest Performances refers to basic risk and return information for the most recent part of the strategy's history.

Latest Performances (Total Return) as of 31-Jan-2019

The first table shows the index's absolute returns over recent short time periods. The next table reports the index's return, volatility and associated Sharpe ratio since the live date of the index. The last table reports the index's return, volatility and associated Sharpe ratio since the base date of the index. For periods longer than a year, the statistics are annualised, whereas the short-term statistics are calculated based on the period examined without annualisation. The corresponding statistics (calculated over the same dates) of the Broad cap-weighted reference index (Broad CW) are also reported, along with those of the Beta cap-weighted reference index (Beta CW) in case of univariated stock selection.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	Index	Broad CW
1-Month Return	7.90 %	8.15 %

Analytics are based on daily **total** returns (dividends reinvested) in **USD**.
Analytics are calculated at 31-Jan-2019 and updated monthly.
Performances are annualised for periods longer than a year.
Live date is 16-Mar-2018.

Since base date	Index	Broad CW
Return	11.12 %	8.60 %
Volatility	16.33 %	18.61 %
Sharpe ratio	0.60	0.39

Analytics are based on daily **total** returns (dividends reinvested) in **USD**.
Analytics are calculated at 31-Jan-2019 and updated monthly.
Performances are annualised for periods longer than a year.
Base date is 21-Jun-2002.

The short-term returns are calculated based on the period examined and are not annualised. On periods longer than a year, the statistics are annualised. The risk-free rates used to calculate the historical Sharpe Ratio are defined according to the regional universe of the index. In case of univariated stock selection, the Beta cap-weighted reference index (Beta CW) is the cap-weighted index whose index constituents are drawn from the same stock selection as that of the Scientific Beta index being analysed. The Broad cap-weighted reference index (Broad CW) is the cap-weighted index whose index constituents cover all stocks in the geographical region of the Scientific Beta index being analysed.

Latest Performances (Net Return) as of 31-Jan-2019

The first table shows the index's absolute returns over recent short time periods. The next table reports the index's return, volatility and associated Sharpe ratio since the live date of the index. The last table reports the index's return, volatility and associated Sharpe ratio since the base date of the index. For periods longer than a year, the statistics are annualised, whereas the short-term statistics are calculated based on the period examined without annualisation. The corresponding statistics (calculated over the same dates) of the Broad cap-weighted reference index (Broad CW) are also reported, along with those of the Beta cap-weighted reference index (Beta CW) in case of univariated stock selection.

Annual Performances

Annual Performances refers to calendar year returns.

Annual Performances (Total Return) as of 31-Jan-2019

The table shows the index's annual returns over the last 10 calendar years. The corresponding statistics of the Broad cap-weighted reference index (Broad CW) are also reported, along with those of the Beta cap-weighted reference index (Beta CW) in case of unvaried stock selection.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	Index	Broad CW
Year 2019 (YTD)	7.90 %	8.15 %
Year 2018	-5.74 %	-4.30 %
Year 2017	20.59 %	21.95 %
Year 2016	11.31 %	11.48 %
Year 2015	3.10 %	1.09 %
Year 2014	17.79 %	13.77 %
Year 2013	33.33 %	32.29 %
Year 2012	15.35 %	15.85 %
Year 2011	7.09 %	1.60 %
Year 2010	20.52 %	15.38 %

Analytics are based on daily **total** returns (dividends reinvested) in **USD**.
Analytics are calculated at 31-Jan-2019 and updated monthly with EOM values.

The return of the current calendar year is the year-to-date return without annualisation. In case of unvaried stock selection, the Beta cap-weighted reference index (Beta CW) is the cap-weighted index whose index constituents are the same as the Scientific Beta index being analysed. The Broad cap-weighted reference index (Broad CW) is the cap-weighted index whose index constituents cover all stocks in the geographical region of the Scientific Beta index being analysed.

Annual Performances (Total Return) as of 31-Jan-2019

The figure displays the index's annual returns over the last 10 calendar years.

The return of the current calendar year is the year-to-date return without annualisation. In case of unvaried stock selection, the Beta cap-weighted reference index (Beta CW) is the cap-weighted index whose index constituents are the same as the Scientific Beta index being analysed. The Broad cap-weighted reference index (Broad CW) is the cap-weighted index whose index constituents cover all stocks in the geographical region of the Scientific Beta index being analysed.

Annual Performances (Net Return) as of 31-Jan-2019

The table shows the index's annual returns over the last 10 calendar years. The corresponding statistics of the Broad cap-weighted reference index (Broad CW) are also reported, along with those of the Beta cap-weighted reference index (Beta CW) in case of unvaried stock selection.

Year 2011	5.50 %
Year 2010	5.13 %

Analytics are based on daily **net** returns (dividends net of tax reinvested) in **USD**.
Analytics are calculated at 31-Jan-2019 and updated monthly with EOM values.

Annual Relative Performances (Net Return) as of 31-Jan-2019

The figure displays the index's annual relative returns with regard to its Broad cap-weighted reference index (Broad CW) over the last 10 calendar years.

Performance Analysis

Performance and Risk Characteristics of equity portfolios allow for the analysis of the reward, the amount of risk and the reward per unit of risk obtained by investors. These characteristics can be calculated in absolute terms, or in relative terms (i.e. in terms of the difference in risks and returns against a cap-weighted reference index).

Performance and Risk Characteristics as of 31-Jan-2019

The table shows summary statistics of the index's absolute performance and risk over the selected analysis period. The corresponding statistics of the Broad cap-weighted reference index (Broad CW) are also reported, along with those of the Beta cap-weighted reference index (Beta CW) in case of univariated stock selection.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	Index	Broad CW
Return	11.12 %	8.60 %
Volatility	16.33 %	18.61 %
Sharpe ratio	0.60	0.39
Sortino ratio	0.85	0.56
Max Drawdown	47.3 %	54.6 %

Analytics are based on daily **total** returns (dividends reinvested) in **USD**.
Analytics are calculated from base date (21-Jun-2002) to 31-Jan-2019.
Analytics are updated monthly with EOM values.
Performances are annualised for periods longer than a year.

Performance and Risk Characteristics as of 31-Jan-2019

The figure shows the index's Sharpe Ratio and Sortino Ratio over the selected analysis period. The corresponding statistics of the Broad cap-weighted reference index (Broad CW) are also reported.

On periods longer than a year, statistics are annualised. The risk-free rates used are defined according to the regional universe of the index. In case of univariated stock selection, the Beta cap-weighted reference index (Beta CW) is the cap-weighted index whose constituents are drawn from the same stock selection as that of the Scientific Beta index being analysed. The Broad cap-weighted reference index (Broad CW) is the cap-weighted index whose constituents cover all stocks in the geographic region of the Scientific Beta index being analysed.

Relative Performance and Risk as of 31-Jan-2019

The table shows summary statistics of the index's relative performance and relative risk with regard to its Broad cap-weighted reference index (Broad CW) over the selected analysis period, along with those to its Beta cap-weighted reference index (Beta CW) in case of univariated stock selection.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	/ Broad CW
Relative Return Over CW	2.52 %
Tracking-Error	4.32 %
Information Ratio	0.58
Treynor Ratio	0.11
Max Relative Drawdown	8.0 %

Analytics are based on daily **total** returns (dividends reinvested) in **USD**.
Analytics are calculated from base date (21-Jun-2002) to 31-Jan-2019.
Analytics are updated monthly with EOM values.
Performances are annualised for periods longer than a year.

Relative Performance and Risk as of 31-Jan-2019

The figure shows the index's Information Ratio and Treynor Ratio with regard to its Broad cap-weighted reference index (Broad CW) respectively over the selected analysis period.

The statistics are based on daily total returns (with dividends reinvested). On periods longer than a year, statistics are annualised.

Risk Analysis

Performance and Risk Characteristics of equity portfolios allow for the analysis of the reward, the amount of risk and the reward per unit of risk obtained by investors.

Risk Analysis as of 31-Jan-2019

The table shows summary statistics of the index's absolute performance and risk over the selected analysis period. The corresponding statistics of the Broad cap-weighted reference index (Broad CW) are also reported.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	Index	Broad CW
Cornish-Fisher 5% VaR	1.43 %	1.62 %
Historical 5% VaR	1.53 %	1.75 %
Max Drawdown	47.3 %	54.6 %
Time Under Water	788	1 164

Analytics are based on daily **total** returns (dividends reinvested) in **USD**.
Analytics are calculated from base date (21-Jun-2002) to 31-Jan-2019.
Analytics are updated monthly with EOM values.

Risk Analysis as of 31-Jan-2019

The figure shows the index's Cornish-Fisher Value-at-Risk and Historical Value-at-Risk over the selected analysis period. The corresponding statistics of the Broad cap-weighted reference index (Broad CW) are also reported.

All statistics are annualised and performance ratios that involve the average returns are based on the geometric average, which reliably reflects multiple holding period returns for investors. The risk-free rates used are defined according to the regional universe of the index. The Broad cap-weighted reference index (Broad CW) is the cap-weighted index whose index constituents cover all stocks in the geographic region of the Scientific Beta index being analysed.

Relative Risk Analysis as of 31-Jan-2019

The table shows summary statistics of the index's relative performance and relative risk with regard to its Broad cap-weighted reference index (Broad CW) over the selected analysis period.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	/ Broad CW
Cornish-Fisher 5% VaTER	0.41 %
Historical 5% VaTER	0.39 %
Max Relative Drawdown	8.0 %
Rel. Time Under Water	679
Extreme Relative Return (5%)	-3.21 %
Extreme Tracking-Error (95%)	7.95 %
Average Tracking-Error	3.75 %

Analytics are based on daily **total** returns (dividends reinvested) in **USD**.
Analytics are calculated from base date (21-Jun-2002) to 31-Jan-2019.
Analytics are updated monthly with EOM values.

Relative Risk Analysis as of 31-Jan-2019

The figure shows the index's Cornish-Fisher Value-at-Tracking Error and Historical Value-at-Tracking Error with regard to its Broad cap-weighted reference index (Broad CW) over the selected analysis period.

The statistics are based on daily total returns (with dividends reinvested). All statistics are annualised and performance ratios that involve the average returns are based on the geometric average, which reliably reflects multiple holding period returns for investors. The risk-free rates used are defined according to the regional universe of the index. The Broad cap-weighted reference index (Broad CW) is the cap-weighted index whose constituents cover all stocks in the geographic region of the Scientific Beta index being analysed.

Robustness Analysis

Alternative weighting schemes may expose an investor to a risk of underperforming respective cap-weighted reference indices over short investment horizons. Moreover, it seems reasonable to assume that certain market conditions may influence the capacity of a given weighting scheme to provide outperformance over the cap-weighted reference index. The Scientific Beta robustness analysis provides insights on the conditions of outperformance or underperformance of Scientific Beta indices with regard to their cap-weighted reference index.

Robustness Analysis as of 31-Jan-2019

For long-only indices, the table shows summary statistics of the index's relative performance and relative risk with respect to its cap-weighted reference index, as well as the 1Y, 3Y and 5Y Probabilities of Outperformance over the last 10 years, and for the corresponding US Long-Term over the last 40 years. For long/short indices, the table shows the 1Y, 3Y and 5Y Probabilities of OutPerformance over the risk-free rate over the last 10 years.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	Index	LT-US
Excess Return	0.95 %	n/r
Tracking-Error	3.62 %	n/r
Information Ratio	0.26	n/r
Prob. of Outperf. (1 year)	63.0 %	n/r
Prob. of Outperf. (3 years)	84.4 %	n/r
Prob. of Outperf. (5 years)	100.0 %	n/r
End of Period	31-Jan-2019	31-Dec-2017
Period	10 years	40 years

Analytics are based on daily **total** returns (dividends reinvested) in **USD**.

Analytics are calculated at 31-Jan-2019.

Analytics are updated monthly with EOM values.

Performances are annualised for periods longer than a year.

All statistics are annualised and based on the geometric average, which reliably reflects multiple holding period returns for investors.

Robustness Analysis as of 31-Jan-2019

The figure, based on a rolling window analysis, shows the 1, 3, and 5 year Probability of Outperformance (over the risk-free rate for long/short indices) with respect to the cap-weighted reference index.

Top Holdings

Top Holdings refers to the information on the largest companies in the strategy portfolio ordered by their weights.

Top Holdings as of 21-Dec-2018

The table lists the weights of the ten largest constituents of the index, in descending order, based on the index's weight profile at the last quarterly rebalancing.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	Country	Weight
Occidental Petroleum Corporation	US	1.04 %
Walmart Inc.	US	0.97 %
ConocoPhillips	US	0.93 %
Phillips 66	US	0.93 %
Motorola Solutions, Inc.	US	0.85 %
Harris Corporation	US	0.84 %
Target Corporation	US	0.82 %
FirstEnergy Corp.	US	0.80 %
Centene Corporation	US	0.78 %
Mastercard Incorporated	US	0.77 %

Analytics are calculated at 21-Dec-2018.

Analytics are updated quarterly.

Top Holdings as of 21-Dec-2018

The figure displays the weights of the ten largest constituents of the index, in descending order, based on the index's weight profile at the last quarterly rebalancing.

Weight Profile Analysis

Weight Profile Analysis refers to the allocation of the investment weights to the constituents in the strategy.

Index Weight Concentration as of 31-Dec-2018

The table shows the index concentration level under various portfolio concentration measures based on the index's weight profile at the last rebalancing time. The quarterly calculated active share expresses the overall deviation of the index vis-à-vis its Broad cap-weighted reference, calculated as half of the sum of the absolute deviations. The corresponding statistics of the Broad cap-weighted reference index (Broad CW) are also reported, along with those of the Beta cap-weighted reference index (Beta CW) in case of unvaried stock selection.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	Index	Broad CW
Effective Number of Constituents	226	120
Number of Eligible Constituents	297	496
Nb. Stocks Cumul. to 90% Cap	221	293
Nb. Stocks Cumul. to 75% Cap	161	149
Nb. Stocks Cumul. to 50% Cap	89	51
Nb. Stocks Cumul. to 25% Cap	36	15
Deconcentration ratio	76.2 %	24.3 %
Active Share	60.70 %	0.00 %
Active Share (average)	60.13 %	0.00 %

*Analytics are calculated at 31-Dec-2018.
Analytics are updated quarterly.*

In case of unvaried stock selection, the Beta cap-weighted reference index (Beta CW) is the cap-weighted index whose constituents are drawn from the same stock selection as that of the Scientific Beta index being analysed. The Broad cap-weighted reference index (Broad CW) is the cap-weighted index whose constituents cover all stocks in the geographic region of the Scientific Beta index being analysed.

Index Weight Concentration as of 31-Dec-2018

The figure displays the index concentration level under various portfolio concentration measures based on the index's weight profile at the last rebalancing time.

Multi-Beta Allocation

Multi-Beta Allocation refers to the information on the weights allocated to the underlying indices that compose the Multi-Beta Index.

Multi-Beta Allocation as of 21-Dec-2018

The Multi-Beta Allocation shows the average weight allocated to the underlying indices since the base date and at the latest quarterly review. The performance of the underlying index over the last quarter is also displayed.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	Latest	Average

Allocations are reported at 21-Dec-2018.
Analytics are updated quarterly.

Multi-Beta Allocation as of 21-Dec-2018

The Multi-Beta Allocation graph exhibits the weight allocated to the underlying indices at the latest quarterly review.

Carbon Metrics

The Carbon Metrics analytics report the greenhouse gas emissions associated with an investment in the index.

Carbon Metrics as of 31-Dec-2018

The table shows the carbon metrics of the index at the last quarterly rebalancing. The corresponding statistics of the Broad cap-weighted reference index (Broad CW) are also reported.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	Index	Broad CW	Change
Carbon Footprint	750 962	400 056	87.7 %
Carbon Intensity	463.8	177.8	160.9 %

Analytics are calculated at 31-Dec-2018.
Analytics are updated quarterly.

Carbon Metrics as of 31-Dec-2018

The figure displays the change in carbon metrics of the index with respect to the Broad cap-weighted reference index (Broad CW) at the last quarterly rebalancing.

CAPM Analysis

The Capital Asset Pricing Model (CAPM) theoretically establishes the relationship between the expected excess return of an equity portfolio and its systematic risk as measured by its exposure to market risk. In CAPM analysis, the equity portfolio excess returns are regressed against market excess returns in order to estimate the exposure to market risk, and that exposure is then used to decompose the returns into reward for being exposed to the equity market and portfolio-specific returns.

CAPM Analysis as of 31-Dec-2018

The table shows the coefficient estimates and R-squared of the regression of the index's excess returns (over the risk-free rate) using the CAPM single factor model over the selected analysis period. Based on the factor exposure, the excess returns attributed to each factor are reported in the last column. The t-statistics associated with the coefficient estimates are also reported.

SciBeta USA HFlnt Div MBeta MStrat 6F4S-EW	Coefficient	t-stat	Perf.
Alpha	3.05 %	3.7	3.31 %
Market	0.88	130.3	5.98 %
r ²	0.95		

Analytics are based on weekly **total** returns (dividends reinvested) in **USD**.

Analytics are calculated from base date (21-Jun-2002) to 31-Dec-2018.

Analytics are updated quarterly with EOQ values.

Performances are annualised for periods longer than a year.

CAPM Performance Attribution as of 31-Dec-2018

The figure displays the attribution of the index's excess return (over the risk-free rate) to market factor and unexplained excess returns (Alpha).

The Market factor is the weekly return of the cap-weighted index of all stocks that constitute the index portfolio. The risk-free rates used are defined according to the regional universe of the index.

Fama-French Factor Analysis

The Fama-French factor model extends the CAPM model by adding the small size factor and the value factor. In Fama-French factor analysis, we explain the equity portfolio performance via linear regression using all three risk factors to better understand the potential factor or investment style biases as well as to form a clear idea of its risk-adjusted performance.

Fama-French Factor Analysis as of 31-Dec-2018

The table shows the coefficient estimates and R-squared of the regression of index's excess returns (over the risk-free rate) using the Fama French three-factor model over the selected analysis period. Based on the factor exposure, the excess returns attributed to each factor are reported in the last column. The t-statistics associated with the coefficient estimates are also reported.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	Coefficient	t-stat	Perf.
Alpha	3.06 %	3.7	3.32 %
Market factor	0.88	129.0	5.98 %
Size (SMB) factor	0.03	2.0	0.02 %
Value (HML) factor	-0.03	-1.5	-0.02 %
r ²	0.95		

Analytics are based on weekly **total** returns (dividends reinvested) in **USD**.

Analytics are calculated from base date (21-Jun-2002) to 31-Dec-2018.

Analytics are updated quarterly with EOQ values.

Performances are annualised for periods longer than a year.

Fama-French Factor Performance Attribution as of 31-Dec-2018

The figure displays attribution of the index's excess return (over the risk-free rate) to market factor, HML factor, SMB factor, and unexplained excess returns (Alpha).

The Market factor is the excess return series of the cap-weighted index of all stocks that constitute the index portfolio over the risk-free rate. SMB factor is the return series of an equal-weighted portfolio that is long small-cap stocks and short the top 30% stocks ranked by market capitalisation (large market-cap stocks). HML factor is the return series of an equal-weighted portfolio that is long for the top 30% stocks (value stocks) and short for the bottom 30% stocks (growth stocks) sorted on book-to-market value in descending order. The SMB and HML factors are market beta neutralised ex-post on a quarterly basis. The risk-free rates used are defined according to the regional universe of the strategy.

Carhart Factor Analysis

Carhart (1997) proposes an extended four-factor model incorporating the momentum factor. In Carhart four factor analysis, we explain the equity portfolio performance via linear regression using four risk factors to better understand the potential factor or investment style biases as well as to form a clear idea of its risk-adjusted performance.

Carhart Factor Analysis as of 31-Dec-2018

The table shows the coefficient estimates and r-square of the regression of the strategy's excess returns (over the risk-free rate) using the Carhart four-factor model over the selected analysis period. Based on the factor exposure, the excess returns attributed to each factor are reported in the last column. The t-statistics associated with the coefficient estimates are also reported.

SciBeta USA HFIInt Div MBeta MStrat 6F4S-EW	Coefficient	t-stat	Perf.

Carhart Factor Performance Attribution as of 31-Dec-2018

The figure displays the attribution of the index's excess return (over the risk-free rate) to market factor, HML factor, SMB factor, MOM factor, and unexplained excess returns (Alpha).

The Market factor is the excess return series of the cap-weighted index of all stocks that constitute the index portfolio over the risk-free rate. SMB factor is the return series of an equal-weighted portfolio that is long small-cap stocks and short for the top 30% stocks ranked by market capitalisation (large market-cap stocks). HML factor is the return series of an equal-weighted portfolio that is long for the top 30% stocks (value stocks) and short for the bottom 30% stocks (growth stocks) sorted on book-to-market value in descending order. The MOM factor is the return series of an equal-weighted portfolio that is long the winner stocks and short the loser stocks. The winner stocks (inversely the loser stocks) are defined as the top 30% (inversely the bottom 30%) of stocks, sorted on the past 52 weeks' compounded returns excluding the most recent month, in descending order. The SMB, HML and MOM factors are market beta neutralised ex-post on a quarterly basis. The risk-free rates used are defined according to the regional universe of the index.

Sector Performance Attribution

Sector Performance Attribution as of 31-Jan-2019

The table shows the results of Menchero Multi-period Attribution, in which the index's outperformance with regard to its cap-weighted reference index is broken down into stock effect, sector effect, and interaction effect. The analysis is based on the selected period.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	Index	Ref	Excess	Stock	Sector	Inter

Multi-Beta Component Performances as of 31-Dec-2018

The figure displays the aggregated relative returns and performance of the component indices.

Index Diversification

The Diversification analytics measure the benefits of portfolio diversification after adjusting for the effect of factor exposures.

Diversification as of 31-Dec-2018

The table shows the average index concentration level and the low correlation objective measure (GLR) based on historical returns and weights over the period. The GLR measure is the ratio of the variance of a portfolio's returns to the weighted average of the variance of its constituents' returns. The Idiosyncratic Risk-Adjusted Return is calculated as the ratio of unexplained return to the standard deviation of the residuals in the risk factor exposure (seven factor) regression. The Change in Specific Volatility is calculated as the difference in volatility of the strategy and its Multi-factor Benchmark, a synthetic portfolio levered to match returns of the respective strategy that contains the same magnitude of systematic risk.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	Index	Broad CW
Effective Number of Constituents (avera...	229.6	133.8
GLR Measure	26.2 %	29.6 %

Analytics are based on weekly **total** returns (dividends reinvested) in **USD**.

Analytics are calculated from base date (21-Jun-2002) to 31-Dec-2018.

Analytics are updated quarterly with EOQ values.

Performances are annualised for periods longer than a year.

The Market factor is the excess return series of the cap-weighted index of all stocks that constitute the index portfolio over the risk-free rate. SMB factor is the return series of an equal-weighted portfolio that is long small-cap stocks and short for the top 30% stocks ranked by market capitalisation (large market-cap stocks). HML factor is the return series of an equal-weighted portfolio that is long for the top 30% stocks (value stocks) and short for the bottom 30% stocks (growth stocks) sorted on book-to-market value in descending order. The MOM factor is the return series of an equal-weighted portfolio that is long the winner stocks and short the loser stocks. The winner stocks (inversely the loser stocks) are defined as the top 30% (inversely the bottom 30%) of stocks, sorted on the past 52 weeks' compounded returns excluding the most recent month, in descending order. The VOL factor is the return series of an equal-weighted portfolio that is long the bottom 30% stocks (low volatility stocks) and short the top 30% stocks (high volatility stocks) sorted on past volatility in descending order. The PRO factor is the return series of an equal-weighted portfolio that is long the top 30% stocks (high profitability stocks) and short the bottom 30% stocks (low profitability stocks) sorted on gross profitability in descending order. The INV factor is the return series of an equal-weighted portfolio that is long the bottom 30% stocks (low investment stocks) and short the top 30% stocks (high investment stocks) sorted on two year asset growth in descending order. The SMB, HML, MOM, VOL, PRO and INV factors are market beta neutralised ex-post on a quarterly basis. The risk-free rates used are defined according to the regional universe of the index.

Risk Factor Exposure as of 31-Dec-2018

The figure displays the exposure of the index's excess return (over the risk-free rate) to Market factor, SMB factor, HML factor, MOM factor, VOL factor, PRO factor and INV factor.

Relative Factor Score

Relative Factor Score identifies the exposure of an index to the academically consensual factors such as Size, Value, Momentum, Volatility, Profitability and Investment.

Relative Factor Score as of 31-Dec-2018

The table shows the relative factor score and relative score intensity of the strategy index, beta cap-weighted index and the broad cap-weighted index.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	Index	Broad CW
Size (SMB) factor	-0.06	-0.57

Analytics are updated monthly with EOM values.

Performances are annualised.

High / Low Vol Regime Rel. Performances as of 31-Jan-2019

The figure displays the index's average, minimum and maximum quarterly relative returns (with respect to its cap-weighted reference index) in quarters characterised by high and low volatility market regimes, respectively. The analysis is based on the complete history of index returns.

The statistics are based on daily total returns (with dividends reinvested). The relative returns and tracking error are annualised. The risk-free rate used is defined according to the regional universe of the index.

Turnover & Capacity

Turnover and capacity analysis addresses the main implementation issues of Scientific Beta indices.

Turnover & Capacity as of 31-Dec-2018

The table shows the turnover level of the index in % and the capacity of the index (long-only indices) as measured by the average market capitalisations, in M\$. The corresponding statistics of the Broad cap-weighted reference index (Broad CW) are also reported, along with those of the Beta cap-weighted reference index (Beta CW) in case of unvaried stock selection. * For long/short indices, the table also reports the average capacity and latest capacity in M\$ of the long branch and the short branch of the unleveraged branch indices. * For Market Beta Adjusted (Overlay) indices, the reported investability measures do not take into account the cost of replication of the cap-weighted index using futures overlay.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	Index	Broad CW
Turnover (annualised)	36.2 %	3.6 %
Average Capacity (M\$)	30 581	102 835
Latest Capacity (M\$)	46 745	171 083

Analytics are calculated at 31-Dec-2018.
Analytics are updated quarterly.

In case of unvaried stock selection, the Beta cap-weighted reference index (Beta CW) is the cap-weighted index whose constituents are drawn from the same stock selection as that of the Scientific Beta index being analysed. The Broad cap-weighted reference index (Broad CW) is the cap-weighted index whose constituents cover all stocks in the geographic region of the Scientific Beta index being analysed.

Turnover History as of 31-Dec-2018

The chart below shows the turnover history of the index since inception on a quarterly basis.

Sector Allocation

Sector Allocation refers to the separation of investment weights of the strategy portfolio into various sectors.

Sector Allocation as of 31-Dec-2018

The table shows industry sector exposures (in weight percentage) of the index, based on the index's weight profile at the last rebalancing time.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	Weight
Energy	6.5 %
Basic Materials	2.0 %
Industrials	9.9 %
Cyclical Consumer	16.0 %
Non-Cyclical Consumer	11.1 %
Financials	15.2 %
Healthcare	13.0 %
Technology	13.7 %
Telecoms	1.2 %
Utilities	11.4 %

Analytics are calculated at 31-Dec-2018.
Analytics are updated quarterly.

The sector classification used is the Thomson Reuters Business Classification.

Sector Allocation as of 31-Dec-2018

The table shows the differences in aggregated sector weights of the index with regard to its Broad cap-weighted reference index (Broad CW), based on the index's weight profile at the last rebalancing time.

SciBeta USA HFInt Div MBeta MStrat 6F4S-EW	Excess Weight
Energy	1.0 %
Basic Materials	-0.3 %
Industrials	0.4 %
Cyclical Consumer	2.8 %
Non-Cyclical Consumer	3.6 %
Financials	-0.7 %
Healthcare	-2.8 %
Technology	-11.0 %
Telecoms	-1.1 %
Utilities	8.1 %

Analytics are calculated at 31-Dec-2018.
Analytics are updated quarterly.

The sector classification used is the Thomson Reuters Business Classification.

Sector Allocation as of 31-Dec-2018

The figure displays industry sector exposures (in weight percentage) of the index, based on the index's weight profile at the last rebalancing time.

Energy Basic Materials Industrials Cyclical Consumer
Non-Cyclical Consumer Financials Healthcare Technology
Telecoms Utilities

Sector Allocation as of 31-Dec-2018

The figure displays the differences in aggregated sector weights of the index with regard to its Broad cap-weighted reference index (Broad CW), based on the index's weight profile at the last rebalancing time.
